

## Technical datasheet – portable boot wash station

- Water inflow can be shut off (on site), must be easy to reach
- (the inflow must be shut off if the boot washer will not be used for an extended period of time)
- The water connection must comply with the provisions of the relevant waterworks and be performed by an authorised specialist (delivery does not include aerator or system separator)
- Ensure the floor is non-slip.
- Check the pipework for leaks after starting up!
- Dimensions: width: 280 mm, height: 190 mm, depth: 420 mm
- Boot washer material: stainless steel 1.4301, brushes: nylon
- The boot washer must be protected from freezing
- Please note: At temperatures below freezing point the water pipes could freeze and there is a risk of slipping on the boot washer!
