Sole cleaner for tennis shoes

The sole cleaner for tennis shoes is already in its second generation of development. Its well-thought-out conception is the result of 10 years of experience. The device was specially developed for use in tennis courts and other areas and can easily cope with a large number of users.

The sole cleaner for tennis shoes is far more advanced than other shoe cleaners and shoe cleaning machines designed for tennis shoes, because sand and dirt are removed and at the same time released into the water, never to re-emerge. This means that no dirt or dust clinging to the brushes that can resurface!

Technology that is simple yet effective:

The brushes that clean the soles are found in a flat, concrete water basin with an automatic, self-regulating filling level¹. The bristles lie just under the surface of the water; only a tiny part juts out.

In this way, when the shoe soles are rubbed against the brushes, any sand and dirt clinging to the tennis shoe soles directly enter the water. The clean shoes can then be dried on the draining area, which is positioned right next to the brushes. Using a sponge, any remaining water can be soaked up and released back below.

The result: **Extremely clean and dry tennis shoes**. What's more, no water or power connection is necessary!

The sole cleaner for tennis shoes is separated in three parts:

- Water container including cover (2 designs: stainless steel / GRP)
- Brush basin with vertical and horizontal brushes, which lie in the water
- Drying area with water drain

Standard design: Protective cover for the stainless steel water container²

By using our stainless steel protective cover, you can fulfil individual wishes. Give your creativity free reign! You could add a club logo or even a coat of arms.

Eco design: Protective cover for the water container made out of GRP

The Eco model comes with a cover made out of glass fibre reinforced plastic (GRP). The GRP cover can vary in colour.

¹ Once full, the self-regulating water container releases the right amount of water until an atmospheric balance is reached. The water level in the basin is always adjusted so that no water can get into the shoes

² The stainless steel cover and basic concrete part come with a 5 year guarantee

Technical Data

1. **Casing / water basins:** concrete, reddish brown
Water tank cover:
Standard design: stainless steel
Eco design: GFRP, green (colour can vary)
2. **Measurements:** 117 cm x 46 cm x 65 cm (Length x Depth x Height)
3. **Brushes:** arranged horizontally and vertically, lie in the water
4. **Weight:** 120 kg (Eco 112 kg)
5. **Electrical data:** No power required
6. **Water connection:** No water required
7. **Guarantee:** 2 years
